A NEW LEVEL OF IMAGING

ULTRA-PRECISE, PATIENT-SPECIFIC
TACTILE REFERENCE MODELS

COST-EFFECTIVE, RAPID, AND
ACCURATE REPRESENTATION OF
BOTH ANATOMY AND PATHOLOGY

IMPROVE PATIENT CONSENT,
LOWER RECOVERY TIME

PRINT ANALYZE STUDY

WHATS IT FOR?

3D printing will help to both revolutionize and personalize medicine, allow care providers to create visual models of a patient's heart, brain, and other vital organs. We believe this technology brings a wide range of benefits to our patients and physicians including:

- IMPROVED SURGICAL PREPARATION
- TRAINEE EDUCATION
- INTER-DEPARTMENTAL COLLABORATION

Imaging Associates is proud to be the first diagnostic imaging center in Alaska to bring 3D printing to our referring physicians and shared patients. Our Stereolithography printing uses a laser to cure liquid resin into hardened plastic, providing high resolution accuracy.

These 3D models will aid in communicating to the patient what we see on the image in two dimensions. These intricately detailed models can also help surgeons while planning complex surgical operations. .
